Ichthus77 wrote:
Are you making -12 be complete/perfect blindness, and positive 12 be complete/perfect vision?

Negative could simply represent blindness and positive could simply represent vision with gradient in between.

The number set here is rather arbitrary. Any number set could have been used.

The point was to illustrate the dynamics of less and more, negative and positive, etc.

Ichthus77 wrote:
Are you saying there could be blindness without vision? Are you saying blindness is not a privation of sight?

Are you saying rust could exist on its own without, say, iron?

Do not both vision and blindness appear on the diagram? With range of gradient between?

Would not exclusion of any aspect of existence be limitation of existence?

Ichthus77 wrote:
A loss of function implies a default function (tie) that is lost. If you build on that (win), you don't add a different function, you just improve the function.

Loss of function indicates loss of function for some particular. The function would still be present elsewhere.

Ichthus77 wrote:
Negative numbers are blurring out into nothing.

Negative numbers do not "blur out into nothing". Nothing is not and cannot be.

It could perhaps be said that negative numbers represent a decline into blindness or represent a descent into darkness.

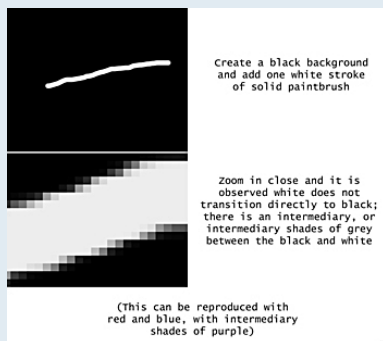

Ichthus77 wrote:
The black/white screen of death, so to speak.

There is obviously something other than the black/white screen

It would be black-grey-white. There is median. There is gradient:

It illustrates the connection and commonality of things:

Daniel,

If all particulars with the ability of sight went extinct or stopped functioning, where (in somewhere else) would the function of sight "be"? If all instances of photosynthesis stopped functioning, what would the formula for photosynthesis describe?

If you make a "machine" that can accurately tell you the entire timeline from beginning to end, you have "made" a "machine" who can lie to you. And how, pray tell, are you going to check their work... output... product?

"The mind of a person plans his way,
But the LORD directs his steps."
- Proverbs 16:9

There are some things that happen more times than others (some things only a one-off), and there are some things that happen at all times or at every time or at Time/Being (the father/condition for the possibility of every particular time/being).

How do you distinguish between a one-off & a One-Off?

If you make a "machine" that can accurately tell you the entire timeline from beginning to end, you have "made" a "machine" who can lie to you. And how, pray tell, are you going to check their work... output... product?

"The mind of a person plans his way,
But the LORD directs his steps."

That's a big if.

A hypothetical I'm not sure would actually occur.

But let's say they did. Let's say all particulars with the ability of sight went extinct. Sight or vision would still exist in [what we perceive as] the past. Or the future. Keep in mind existence concerns spatial location as well as temporal location.

“ Ichthus77 wrote:

If all instances of photosynthesis stopped functioning, what would the formula for photosynthesis describe?

Another big if.

Even if all instances of photosynthesis stopped occurring the formula for photosynthesis would still be the formula for photosynthesis. The formula would still be the formula.

Think of the dodo bird. The dodo bird is extinct but the description of the dodo bird is still the description of the dodo bird.

Daniel,

When the past becomes what we perceive as behind us (versus WITH or APPEARANT to us) what/where is behind us in order for what we perceive of it to be true of (correspondent with) something?

When the future is still what we perceive as ahead of us (versus WITH or APPEARANT to us) what/where is ahead of us in order for what we perceive of it to be true of (correspondent with) something?

Before the appearance/actuality & (hypothetically) after the disappearance/inactuality of humans/photosynthesis (or any other particulars/possibles), the stuff that is said of them is not said of their appearance/actuality, but only of their possibility/potential/capacity—and so (when not appearant/actual) is really only true of _____.

If you make a "machine" that can accurately tell you the entire timeline from beginning to end, you have "made" a "machine" who can lie to you. And how, pray tell, are you going to check their work... output... product?

"The mind of a person plans his way,
But the LORD directs his steps."
